

NexGen Networks Lands Large Contract with Major Service Integrator and Cloud Provider in Asia

Top global enterprises continue to take notice as NexGen expands and enhances its Asia network infrastructure

NexGen Networks, a leading global provider of ultra high-speed fiber-optic services with a distinctive customer service approach, has announced that it has secured a major deal to provide global transport solutions to a major service integrator and cloud provider in Asia. The contract comes on the heels of several major investments and expansions by NexGen in the region, creating truly expansive global presence with consistently high service standards.

“NexGen continues to invest considerably in new routes and points of presence in the Asia-Pacific, and customers in the region with global operations that require a high standard of managed network support are seeing us as an attractive option,” says NexGen’s Jeffrey Barth. “Our service-surround approach comprises multifaceted support methods for a resilient, all-around service package that few providers of truly global transport solutions can match.”

In recent years, NexGen has undertaken numerous steps to build on its network infrastructure in the Asia-Pacific region:

- In 2015, NexGen secured backbone capacity on the Transit Europe-Asia (TEA) terrestrial cable network, which completed a proprietary global circuit that boasts the lowest possible latency for connections between Asia and Europe, with latency times of 164ms between London and Hong Kong.
- Also in 2015, NexGen built a new point of presence at the Equinix TY3 datacenter in Tokyo
- In the same year, worked with iAdvantage to create a Hong Kong point of presence
- In 2016, NexGen partnered with China Telecom on a Shanghai point of presence.

NexGen’s commitment to maintaining and proactively enhancing its flexible, dependable, ultra-high speed global transport solutions continues to win the business of top enterprise customers in the Asia-Pacific region and around the world.

About NexGen Networks

NexGen Networks, <http://www.nexgen-net.com>, is the premier provider of tailored, high-capacity communications services to carrier and enterprise customers. Nexgen Networks is committed to delivering cost-effective, custom solutions coupled with superior industry expertise, service and support that allows for unparalleled time to market connectivity. It offers a comprehensive suite of facilities-based services including: Ethernet, SONET, Wavelength, Dark Fiber, Internet Access, Colocation and more. Its fiber optic network leverages unique rights-of-way that deliver connectivity to the major metropolitan areas in North America, Europe and the Far East. While consistently building upon its private and public IP and Ethernet expertise and evolving its capabilities to continually meet the needs of its customers, large and small, it has continued to maintain a superior standard of customer service and support.
